

LVL UP Rx

Not for everyone. Only for those ready to level up.

Energy

Cellular fuel, optimized

Recovery

Bounce back faster

Skin

Radiance, redefined

Performance

Sleep, body, results

What This Is

"Your body already knows what to do. Peptides simply help guide it."

At LVL UP Rx, we work with the intelligence your body already possesses. Peptides are precision signaling molecules — naturally occurring compounds that communicate with your cells to support the processes that matter most. They don't override your biology. They refine it. Think of them as a quiet upgrade running in the background, amplifying what your body already does best.

The result is a protocol that feels less like intervention and more like unlocking what was always there. Whether your focus is energy, aesthetics, recovery, or total-body optimization, the right peptide stack can help you perform at a level you've only glimpsed before.

Energy Support

Fuel your cells at the mitochondrial level for sustained output without the crash.

Recovery Support

Accelerate tissue repair and reduce the downtime between peak performances.

Skin Support

Target collagen synthesis and cellular renewal for a visible, lasting radiance.

Sleep & Body Support

Align your recovery cycles with your physique goals — while you sleep.

Energy — Feel the Difference

Feel like your battery is always running on reserve? You're not imagining it. As we age — or simply push harder — the body's natural NAD+ levels decline, and with them, the cellular machinery that powers everything from mental sharpness to physical stamina begins to slow. NAD+ support targets this directly, working at the level of the mitochondria to help restore the energy currency your cells depend on.

This isn't a stimulant. There's no spike, no crash, no borrowed energy from tomorrow. What NAD+ offers is foundational — the kind of clean, sustained vitality that makes long days feel manageable and demanding performance feel natural again. High-achieving individuals across finance, athletics, and executive leadership have made it a cornerstone of their optimization protocols.

Best For

Busy, driven individuals who feel chronically drained and demand more from every waking hour.

What It Supports

- Cellular energy production
- Mental clarity and cognitive sharpness
- High-performance lifestyle demands
- Sustained vitality without stimulants

Skin — Look as Good as You Feel

Your skin tells your story. And for those who invest in their performance, aesthetics, and longevity, the last thing they want is a complexion that doesn't keep pace. GHK-Cu — copper peptide — has become a gold standard in the aesthetic optimization world, celebrated for its role in supporting the skin's natural collagen synthesis pathways and cellular regeneration processes that keep skin looking dense, luminous, and undeniably alive.

What sets GHK-Cu apart is its elegance. It works with your skin's biology rather than forcing superficial changes, making the results sustainable and progressive. Clients who incorporate it into their routines consistently report a quality of glow that turns heads — the kind that reads as health, not product. It's the internal equivalent of your best filter, every single day.

Visible Confidence

Supports skin appearance improvements that are noticed — by you, and by others. The kind of results that build genuine confidence.

Glow-Focused Routines

Integrates seamlessly into aesthetic-focused protocols and luxury skincare regimens already dialed in for maximum effect.

Aesthetic Optimization

Popular among clients who treat their appearance as an extension of their overall performance and personal brand.

Recovery — Stop Feeling Beat Up

Hard training, demanding schedules, and physical stress take a toll — and the difference between good and elite isn't just how hard you push, it's how fast you recover. BPC-157 and TB-500 have become two of the most sought-after recovery support compounds among serious athletes, active professionals, and anyone who refuses to let downtime define their trajectory. Together, they address the full spectrum of physical recovery: from tissue repair and inflammation support to the restoration of connective integrity.

BPC-157, known in performance circles as the "Body Protection Compound," supports the body's natural healing signaling. TB-500 complements it by promoting cellular repair and flexibility throughout the musculoskeletal system. The combination creates a recovery environment where the body is better equipped to bounce back from the physical demands placed on it — so the next session, the next meeting, the next challenge, hits differently.

Physical Stress Support

Designed for those who push their bodies and expect to recover without compromise.

Active Lifestyles

Popular among gym-goers, competitive athletes, and physically demanding professionals.

Faster Bounce-Back

Supports the body's natural ability to return to peak function more efficiently between efforts.

Sleep + Body — Your Results Happen While You Rest

The most overlooked performance variable isn't training — it's sleep. While you rest, your body orchestrates the vast majority of its repair and regeneration work, governed largely by the natural pulsatile release of growth hormone. CJC-1295 and Ipamorelin work synergistically to support this process, helping the body maintain optimal signaling during the critical overnight recovery window when physique transformation and cellular restoration are at their peak.

This stack has earned a devoted following among body-composition-focused clients because it doesn't force the system — it supports the body's natural rhythm. The result is deeper, more restorative sleep alongside the kind of overnight recovery that compounds over time. Clients report waking up feeling genuinely restored, with physique changes that align with the discipline they put in during the day. Your effort deserves results. This supports the environment where they happen.

Best For

Clients focused on body composition, physique refinement, and maximizing the regenerative power of every night's sleep.

Protocol Supports

- Natural overnight recovery cycles
- Sleep quality and depth
- Body-composition goals
- Hormonal signaling alignment

Metabolic — Make Your Body Work Smarter

Metabolic efficiency is the quiet differentiator of high performers. It's the difference between a body that burns through resources inefficiently and one that processes energy with precision — adapting, optimizing, and sustaining output without unnecessary waste. MOTS-c, a mitochondria-derived peptide, has emerged at the forefront of metabolic optimization research and is now one of the most discussed compounds in longevity and biohacking circles for exactly this reason.

Originally identified in the mitochondrial genome, MOTS-c functions as a metabolic regulator — supporting the body's ability to manage glucose metabolism, adapt to physical and metabolic stress, and maintain efficiency under demanding conditions. For optimization-focused clients who have already dialed in nutrition, training, and recovery, MOTS-c represents the next frontier: the internal efficiency upgrade that helps the machine run cleaner, longer, and smarter. It's the kind of edge that doesn't announce itself loudly — it simply shows up in your results, your resilience, and your capacity to keep performing at a level others can't sustain.

1

Metabolic Efficiency

Supports the body's ability to process energy cleanly and adapt under demand.

2

Stress Adaptation

Helps the body manage physical and metabolic stress with greater resilience.

3

Optimization Edge

Popular with biohackers and performance-driven clients seeking the next-level advantage.

The Glow Stack — Look Better. Feel Better.

Some results are felt. Others are seen. The Glow Stack delivers both. Designed for clients who refuse to choose between internal performance and external radiance, this curated combination brings together our most aesthetically focused compounds into a single, elegant protocol. It's the stack built for those who understand that how you look and how you feel are not separate goals — they are two expressions of the same optimized state.

By pairing skin support with comprehensive recovery support, the Glow Stack addresses the full cycle of cellular renewal. Skin that regenerates efficiently, inflammation that resolves cleanly, tissue that repairs with precision — the visible result is a quality of appearance that goes beyond topical treatments and surface-level solutions. Clients who commit to this protocol report a transformation in overall presence: clearer skin, improved tone, and the unmistakable glow of a body that is genuinely performing at its best.

This is not a shortcut. It is a sophisticated, compounding protocol for individuals who have invested in themselves and expect their aesthetics to reflect that investment. The Glow Stack is premium by design — because looking and feeling your best is a standard, not an aspiration.

Skin Support

Copper peptide complex targeting collagen synthesis, cellular renewal, and long-term radiance. Visible results that compound over time.

Recovery Support

Tissue repair and cellular restoration working beneath the surface — because flawless results require a body that heals as beautifully as it performs.

Educational Disclosure

"For educational purposes only. Results vary. Not intended to diagnose, treat, cure, or prevent any disease."

The information presented throughout this brochure is provided for educational and informational purposes only. LVL UP Rx is committed to transparency and to supporting informed conversations between clients and their qualified healthcare providers. All content herein reflects general wellness and lifestyle information and should not be interpreted as medical advice, clinical guidance, or a substitute for professional medical consultation.

Individual results vary. The compounds and protocols referenced are discussed in the context of general health optimization and educational awareness. No claim is made or implied regarding the diagnosis, treatment, cure, or prevention of any medical condition or disease. We strongly encourage all individuals to consult with a licensed healthcare professional before beginning any new wellness protocol, supplement regimen, or lifestyle modification.

- ❏ All peptide and wellness protocols should be undertaken under the supervision of a qualified medical professional. LVL UP Rx supports informed, responsible optimization — always within the appropriate clinical and regulatory framework.

LVL UP Rx exists to educate, inspire, and equip high-performance individuals with the knowledge to have meaningful conversations about their health. We are proud to be a resource in your optimization journey — and equally proud to hold ourselves to the highest standards of integrity in how we present that information.
